

Genius Moments Solution Guide

Updated 6/4/26

Overview & Fundamentals

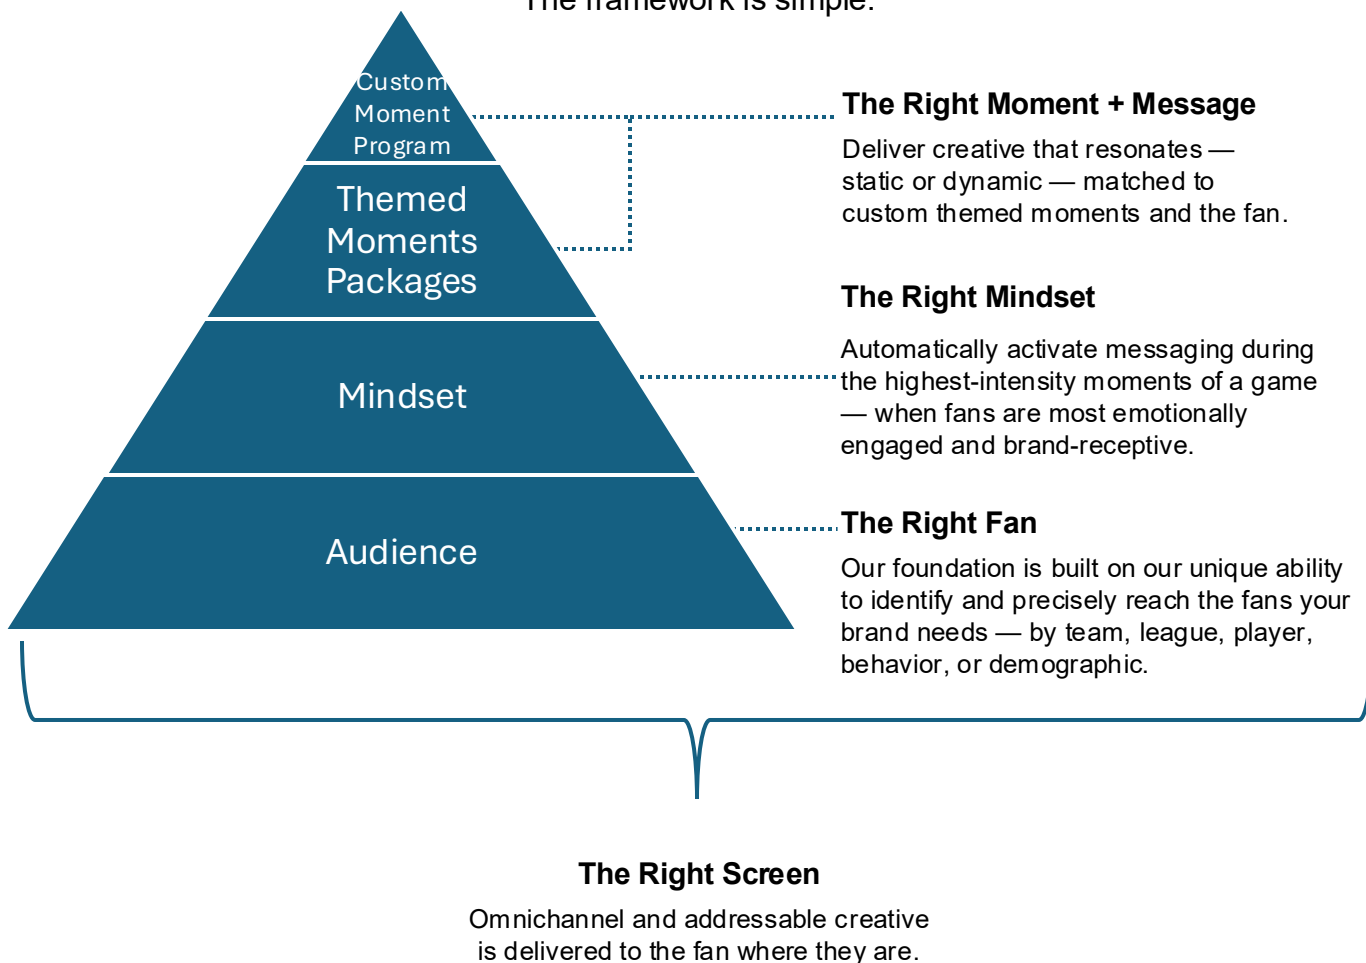

Value Proposition

Other platforms reach audiences. Genius Sports knows who the fans actually are — identified through deterministic, observational, and transaction-based data, not assumed viewership. Genius Moments layers that fan intelligence with our analytics-backed understanding of the emotional arc of the sports calendar — the wins, the rivalries, the playoff pushes, the moments that move fans before they even happen — then dynamically shifts the right creative messaging to the right fans at the points that matter most. This is better, more accurate sports inventory.

What is Moments?

Moments is Genius Sports' programmatic targeting solution that connects brands to sports fans at the most impactful points of a game — when emotional intensity is highest and brand receptivity is proven to peak.

The framework is simple:

1. The Right Fan – Fan Graph Targeting

Genius Sports provides the full fan profile via billions of sports and lifestyle deterministic interactions unified into the industry's richest fan graph, purpose-built for sports. Using this fan graph, Moments builds your audience in two layers – baseline audience targeting and, as an optional layer, fan relationship to the game.

Layer 1 Audience Targeting

Select desired target audience based on client goals. This can be as simple as “QSR customers”.

Layer 1 — Audience Targeting	
<i>Dimension</i>	<i>Description</i>
Behavioral / Category	Segmented by purchase behavior, subscription activity, or content consumption patterns
Demographic	Age, gender, geography, household income, and other profile attributes
Purchasing Trends	Past buying signals and brand affinity data to identify high-intent audiences

Layer 2 Fan Relationship to Game (Optional)

Once the audience layer is defined, clients can optionally apply additional filters to sharpen the audience further. The Moments Engine automatically determines how a fan relates to what is happening on the field. However, if a client wants to reach a specific type of fan, they can layer this refinement on.

Layer 2 — Fan Relationship to the Game (Optional)	
<i>Fan Type</i>	<i>Description</i>
League Fan	A fan of the league with no strong rooting interest in a specific team
Team Fan	A fan of one of the teams playing in the game
Event Fan	A fan of a tentpole event (Super Bowl, All-Star Game, March Madness, World Cup, etc.)
Sport Fan	A fan of the sport with no strong rooting interest in a specific team

2. The Right Mindset & Moment – Moments Engine

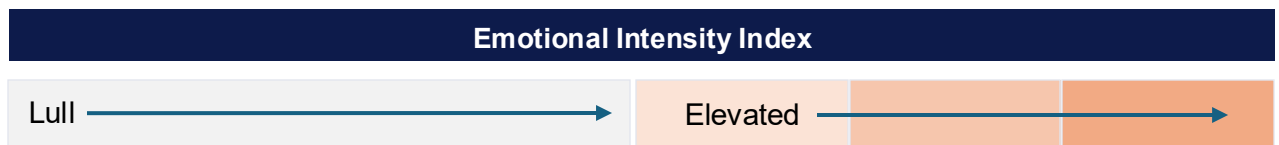

The Moments Engine monitors live game data to identify when fans are in their most heightened emotional states and when the most important thematic moments occur. Research consistently shows that brand recall, purchase intent, and engagement are significantly higher during these high-intensity windows. This combination produces Moments, which is offered as a possible layered combination of the following – foundational **Mindset Targeting** and layered customization **Themed Moments Packages**.

Mindset Targeting – Foundational Layer

1. How It's Determined

The Emotional Intensity Index – Every Moment is Scored for Context

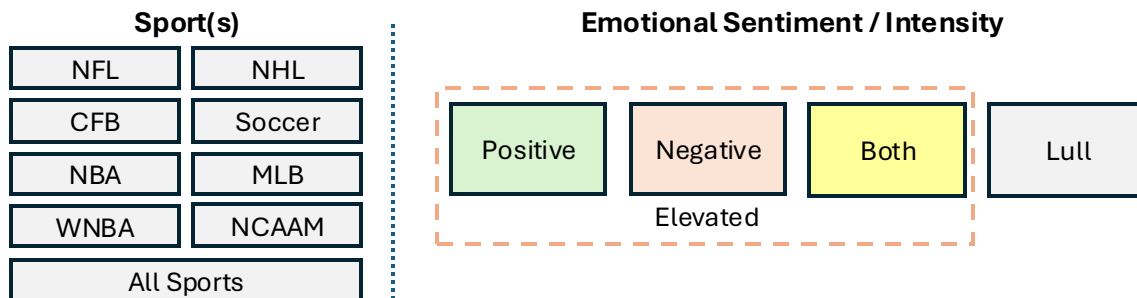

A weighted composite of four real-time signals producing a single score. The index determines inventory tier and when the platform fires.

2. How It's Sold

Intensity Targeting

Select from each of the following qualifiers to best fit client objectives. The platform then reaches every qualifying fan — automatically.

Examples: *All Sports + Positive; NBA + Negative; WNBA + Both; MLB + Lull*

3. Audience Logic: Who Gets the Ad?

Once the audience and intensity targeting parameters are determined, the Moments Engine takes over. The Moments Engine does not just detect a moment — it determines which fans should see the ad based on that moment. Audiences are dynamically shifted in real time to accommodate terms of package:

- Activate fans of the corresponding team when intensity targeting parameters trigger (i.e. *Knicks advance to finals* -> *Knicks fans in positive, elevated state* -> *messaging turned on for Knicks fans*)
- Deactivate fans that do not meet intensity targeting parameters
- Turn off delivery entirely during low-intensity stretches on both sides (unless “lull” is selected targeting parameter, then the inverse would apply)

2. The Right Mindset & Moment – Moments Engine (Cont.)

Themed Moments Packages

1. How it's Determined

Themed packages are an additional layer of customization. The Themed Package library is divided into two buying categories: Emotion-based and Context/Event-based. These packages were created to reflect the primary emotions felt during sport and around the highest-intensity events/situations. Like Emotional State/Intensity Targeting, these packages are designed to be “live” during the entire flight. This means signals will activate during pregame/in-game/postgame when applicable. **Thematic Packages are only executable via DCO.**

For off the shelf, each individual package contains a set list of qualifying signals that correspond to the overarching package emotion or event/context. This list can be adjusted to be sport/league-specific. Breakouts of each off the shelf package can be found in the Appendix. For custom packages, you must work with the sales enablement team to create a package using approved signals.

EMOTION	CONTEXT / EVENT
Joy – <i>Celebration, Triumph</i>	Game-Making / Highlight Plays
Awe & Admiration – <i>Spectacle, Brilliance</i>	Upsets / Comebacks / Underdogs
Hope – <i>Anticipation, Belief, Will</i>	Big Matchup – <i>Rivalry, Championship, Playoff Implications, Elimination</i>
Tension – <i>Dread, Threat, Held Breath</i>	Winners
Sadness – <i>Empathy, Resilience, Loss</i>	Tournament
Relief – <i>Exhale, Gratitude, Ease</i>	

2. How it's Sold

After determining sport/league, select package(s) from above based on what aligns best with client objectives/messaging. The package title can be modified to best align with brand messaging. Once the package is selected, the sales enablement team (internal POC: Madeline Higgins) can assist with curating a list of relevant signals if customization is required.

3. Audience Logic: Who Gets the Ad?

Once the audience and moments package are determined, the Moments Engine takes over. The Moments Engine determines which fans should see the ad based on that moment. Audiences are dynamically shifted in real time to accommodate terms of package via DCO:

- Custom creative is triggered to fans of the teams where the preselected moment within package has occurred

This means a campaign can be live throughout a game but only reach fans in the emotional state the client wants to connect with.

2. The Right Mindset & Moment – Moments Engine (Cont.)

How They Work Together

Mindset Targeting

- Foundational Layer
- Always-on
- Automatically igniting/suppressing based on parameters selected
- Static/predetermined creative fires accordingly

Themed Moments Package

- Customized, precision layer
- Activates only when specific, predetermined moment signals occur
- Creative is directly tied to the “moment” and is managed via DCO

3. The Right Message – Custom Creative

Moments supports both standard creative delivery and Dynamic Creative Optimization (DCO) for clients who want to take personalization a step further.

Standard Delivery

Clients provide their campaign creative. Genius handles targeting and moment-based activation — the right ad reaches the right fan at the right time without any additional creative complexity.

Custom Creative

For brands seeking deeper alignment between creative and moment, Genius offers DCO as an optional layer. DCO enables creative to adapt in real time based on the specific event signal that triggered delivery. DCO is available for all moments offerings.

How it works:

- Client provides Genius with campaign assets, messaging variations, and KPIs
- Creative is mapped to specific moment types (e.g., a different message for a touchdown vs. a momentum shift)
- The correct creative variant is served automatically when the signal fires

DCO is optional. It is best suited for clients with strong brand storytelling goals and messaging who want their creative to feel native to the moment.

Where DCO Runs

Social: Facebook, Instagram, X, TikTok, Snapchat **Programmatic:** Display, CTV*

*Some restrictions exist for CTV, please work with Christian's team for guidelines

Additional DCO / Creative Resources Breakdown TBA

4. Activation Pathways

Curated Deal ID

Each Moments package executes under the umbrella of a single Deal ID for each selected platform. Our API is structured to target the selected audience under the parameters established in the deal structure. Additional FAQ on Deal ID can be found in the Appendix.

Activation

Platforms: LiveRamp, Experian, AWS, Merkury (Dentsu), Infosum (WPP), Epsilon (Publicis)

SSPs: Pubmatic, Equativ, Index Exchange, Magnite, OpenX

DSPs: Basis, Amazon, Viant, Trade Desk, Yahoo, Nexxen, Google, Stack Adapt

Social: Activation via LiveRamp (Instagram, Facebook, TikTok)

For full activation process details, please [reference the Moments Activation Playbook](#).

How to Package

Step 1 – Evaluate Client Creative Needs, Goals & Messaging

The consultation phase is critical for building the correct moments package for two reasons:

1. Consider the target audience:
 1. Who is the core target audience listed in the brief?
 2. Does client have a specific type of fan they're trying to reach? (i.e. league, team)
2. Client creative needs and goals must be considered. The following questions should be asked:
 1. Does the client have multiple creatives?
 2. Does the client want to reach different customer segments with different messaging?
 3. Is the client looking to activate via DCO partially? Entirely?
 4. What channels is the client looking to activate across?
3. Client messaging/campaign brief will direct which packaging strategy is pursued in Step 3 – mindset targeting or mindset targeting + themed moments package.

Step 2 – Identify Audience Targets

Using our audience insights and information provided by client brief, determine target audience

Internal Point of Contact: Jonathon King

Layer 1 — Audience Refinement		Layer 2 — Fan Relationship to the Game (optional)	
Dimension	Description	Fan Type	Description
Behavioral / Category	Segmented by purchase behavior, subscription activity, or content consumption patterns	League Fan	A fan of the league with no strong rooting interest in a specific team
Demographic	Age, gender, geography, household income, and other profile attributes	Team Fan	A fan of one of the teams playing in the game
Purchasing Trends	Past buying signals and brand affinity data to identify high-intent audiences	Event Fan	A fan of a tent pole event (Super Bowl, All-Star Game, March Madness, World Cup, etc.)
		Player Fan	A fan of a specific player participating in the game

Step 3 – Select Packaging Strategy

Mindset Targeting

1. Select Sport(s)

- NFL
- CFB
- NBA
- WNBA
- NCAA Basketball
- NHL
- MLB
- Soccer
- All of the Above

If client wishes to pursue sport not listed, please reach out to Sales Enablement.

2. Select Sentiment/Intensity

- Positive
- Negative
- Both
- Lull

Optional Customization Layer

Themed Moments Package

1. **Determine Package Type** – select which aligns best with client brief/campaign messaging. All packages are designed to be off-the-shelf – accompanying signals for each (multi-sport and sport-specific) can be found in the appendix.

Emotion-based

- **Joy** – *Celebration, Triumph*
- **Awe & Admiration** – *Spectacle, Brilliance*
- **Hope** – *Anticipation, Belief, Will*
- **Tension** – *Dread, Threat, Held Breath*
- **Sadness** – *Empathy, Resilience, Loss*
- **Relief** – *Exhale, Gratitude, Ease*

Event/Context-based

- **Game-Making / Highlight Plays**
- **Upsets / Comebacks / Underdogs**
- **Winners**
- **Big Matchup**
- **Tournament** – *World Cup, March Madness, Playoffs*

2. **For opportunities that require additional customization beyond predetermined signals in Appendix**, please submit your brief to Madeline Higgins/sales enablement (TBA slack workflow). The team will respond back with suggested package details.

Step 4 – Determine Creative Execution Strategy

Determine DCO plan that best suits client and align with parameters set in steps 2 & 3.

Internal POC: Christian Abbonizio

How it should come together – Mindset Targeting

Below is an approved example that summarizes partnership activation. This example for Seat Geek is Mindset Targeting (NBA + Positive).

Step 1 – Evaluate Client Goals/Strategy

- Client does not have custom creative and is purely interested in activating on winning fans and losing fans
- Goal: sell tickets

Step 2 – Identify Audience

- NBA Fans

Step 3 – Select Mindset Targeting Strategy

- Decision: NBA + Positive; NBA + Negative

How it should come together – Mindset Targeting + Themed Moments Package

Below is an approved example that summarizes partnership activation. This example for Raising Cane's is Mindset Targeting (Positive) + Moments Package (Emotion - Joy) targeting NFL and CFB fans.

Step 1 – Evaluate Client Goals/Strategy

- Reach regional NFL/CFB fans with scale and custom creative messaging
- Decision: Custom Moments route (foundational + custom layer)

Step 2 – Identify Audience

- Regional NFL / CFB fans + QSR visitors

Step 3 – Select Mindset Targeting Strategy

- Decision: NFL,CFB + Positive

Step 4 – Select Themed Moments Package

- Raising Cane's brand messaging = One Love
- Decision: best match is “Joy” package

Deal ID Setup Overview & FAQ

Deal ID Build

Below are the steps to follow for Deal ID buildout:

Step	Owner	Involved
1 Fill out " Moments - Deal ID " request form; must add Customer Success as watchers on the ticket	Sales	
2 Deal Desk determines the Moments Type: Prebuilt Moments or Custom Moments	Deal Desk	
2 A For Prebuilt Moments, these can be added directly from the Deal Arena	Deal Desk	
2 B For Custom Moments, Deal Desk requests the Custom Moment(s) to be built via Product	Deal Desk	Product
3 Once all Moments are available within the Deal Arena, Deal Desk will package up the Deal ID & push to the SSP	Deal Desk	
4 Deal ID details emailed to Sales team with the Customer Success team on CC, ready to be shared with the client.	Deal Desk	
5 Deal ID package (Deal ID details, setup instructions & best practices) emailed to the client, with a Customer Success intro	Sales	Customer Success

Deal IDs must be separated by platform

Deal ID's are synced to DSP's so each DSP will require a unique Deal ID. Furthermore, some DSP's require seat ID for specific buyer and some allow it to run for every seat.

Deal IDs cannot be set up for social

Social doesn't allow for deal ID's since it's not programmatic. Social moments require a different set up flow. Please reference the [Activation Playbook](#) and/or contact Stacia Won for assistance.

How is the API logic via Moments integrated/digested into the Deal ID to determine when to bid/who to target?

Each moment is associated with an action. Team Wins -> Target Winning Team Fans. In our system, when the moment is detected, the API will take an optimization action which could be changing the audience segments or the geo we're targeting. We can customize the action to the moment but it's mainly adjusting which fan segments to target.

DCO Summary

DCO is available at Genius Sports for Programmatic and Social but follows two workflows:

- Programmatic Workflow – Professional Services
- Social Workflow – Genius Creative/Spirable Platform

Both workflows enable and deliver on DCO business benefits.

Operation Model

	Social	Programmatic
